

# ROOF CONSULTATION & TESTING

Dunlop Roofing  
& Manufacturing

## WHY IS IT IMPORTANT TO RECEIVE A ROOF CONSULTATION FROM DUNLOP ROOFING & MANUFACTURING?

A quality roof evaluation is essential in determining the overall condition of your roof. Honest and accurate consultations result in preventative roof repairs, roof restorations and complete roof replacements. Detailed evaluations performed by Dunlop Roofing & Manufacturing can aid in determining the life cycle of your roof and how much useful life is left. Our findings provide precise roof consultations to our customers that determine the condition of your roof and if repair or restoration is needed. Your roof is quintessentially the most important part of your property's structure and is often the most overlooked. A roof evaluation can proactively determine if repairs or restorations are needed now or in the future to maximize the useful lifespan of your existing roof and potentially avoid unplanned and costly roof repairs and full roof replacements. Just because your roof is out of sight, don't let it become out of mind. Call Dunlop Roofing & Manufacturing at (706) 342-0055 today to set up your free roof consultation!

### INFRARED ROOF TESTING

Dunlop Roofing & Manufacturing provides infrared roof testing as a standard service offering for all of our customers. When we complete a Thermoscan of your roof, we are measuring for the loss of heat in areas where water damage may have occurred. Infrared testing is a precise and accurate application that removes any inaccuracy or assumption of the condition of your roof.

### CORE ROOF CUTS

Core Cut Testing determines what options are available to meet state building codes and insurance requirements
